Sleep Care Device

The Silent Sleep Device That Soothes The Brain

znie | Sleep Care Device

☾ The Znie Lite

The **Znie Lite** is a digital device designed to improve sleeping habits. It's made especially for those who struggle to fall asleep and stay asleep. Generating **Extremely Low Frequencies (ELF)**, the **Znie Lite** works to align brain activity, preparing your mind and body to take rest. Improve sleeping habits safely and securely without over stimulating your senses, or making drastic changes to your lifestyle.

☾ Restoring Balance

Brain Wave Synchronization

Our brains send and receive information via electrical signals. These signals are otherwise known as **brain waves** that take to various frequencies between 0.5Hz and 100Hz depending on our physical and mental condition.

The brain has one interesting feature.

When we come into contact with external frequencies similar to our brain waves, we naturally gravitate and match the frequencies of that band. This phenomenon is called "brain wave entrainment" or "**brain wave synchronization**".

Brain wave synchronization allows us to tune and generate specific brainwaves, which induce us into **states of rest and sleep**.

However, most brain wave synchronizing products use audio which can adversely worsen brain fatigue (hearing loss/ headaches/ irregular sleep patterns).

The **Znie Lite** is inaudible to the ears of humans and animals.

It generates a silent and non-invasive ultra low frequency that mirrors the waves found in our brain. As a result, it guides our brain to a desired state.

***Znie Lite is not a medical product and cannot be used to reduce stress or treat insomnia. Professional consultation is required to diagnose and treat such conditions.**

☾ Znie Lite Superior

Free from sensory fatigue

Unlike conventional products that utilize sensory organs in bettering sleep, Znie Lite is clear from causing additional stimulation, with no reported side effects.

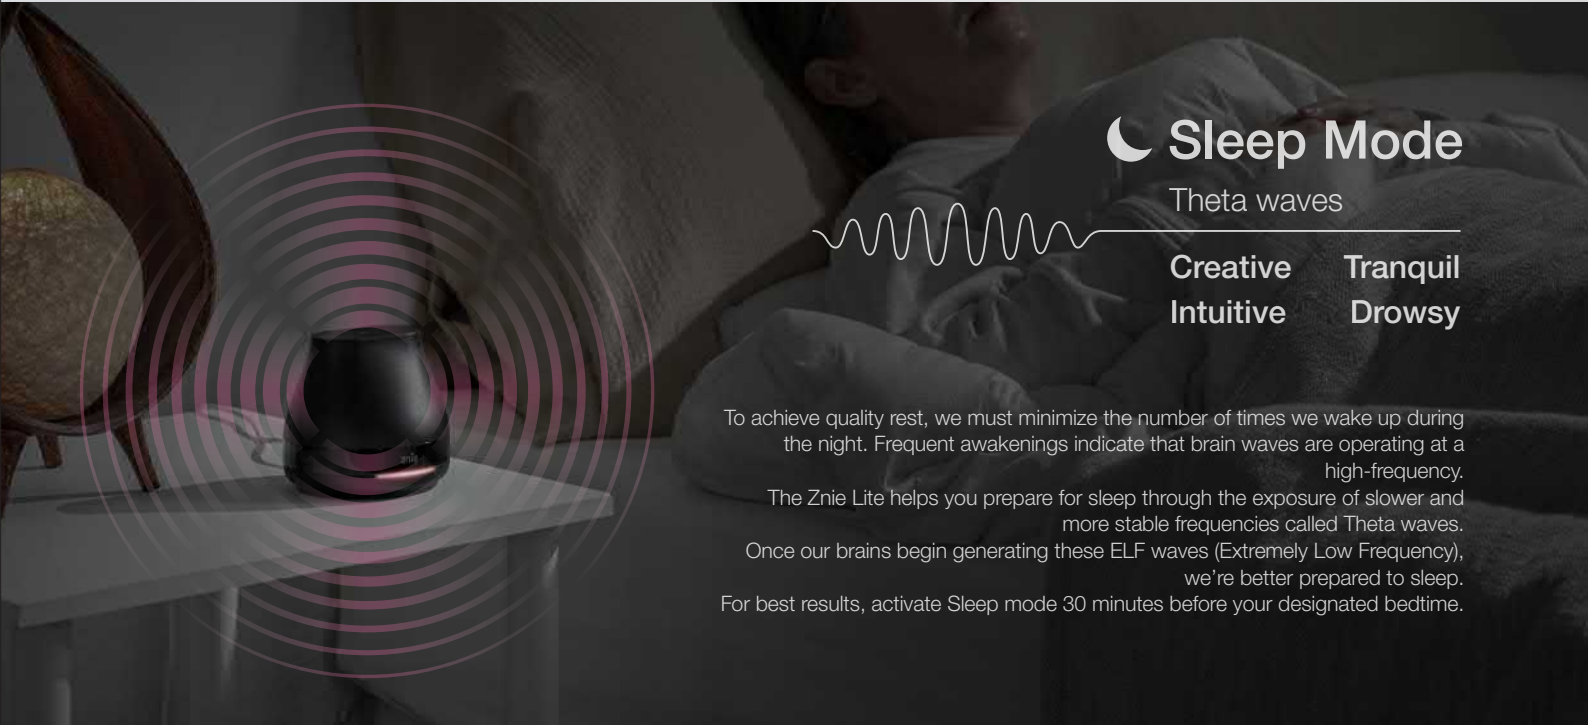

Non-invasive technology

The exposure of ELF signals to the brain are harmless, allowing brain synchronization that's safe for all ages. The Extremely Low Frequencies produced by the Znie Lite are typically emitted at a lower intensity than naturally occurring in our brains.

No accessories needed

The Znie Lite is free from body attachments, and can be operated from anywhere in the room without unnecessary physical contact—allowing your brain to focus solely on sleeping.

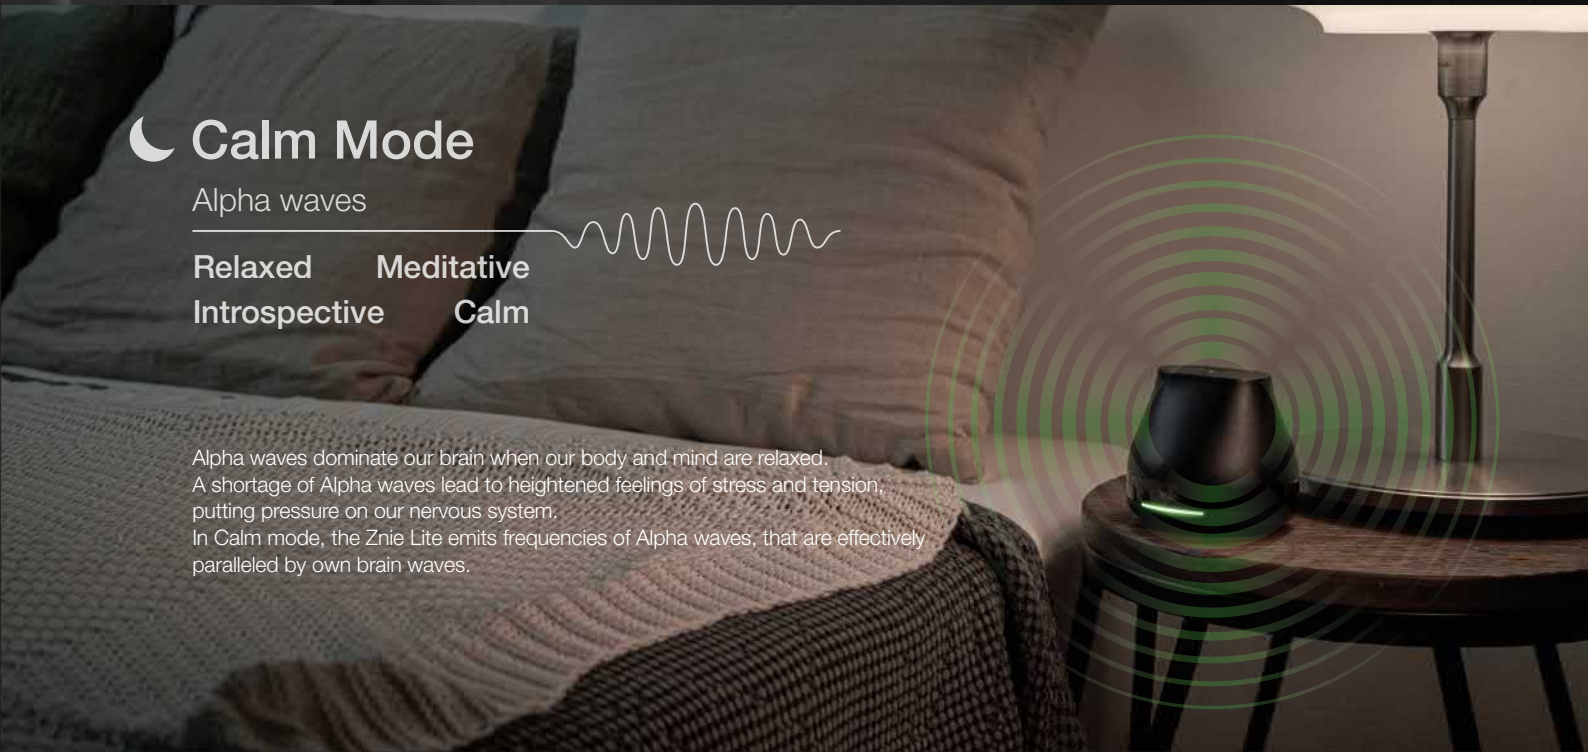

☾ Sleep Mode

Theta waves

Creative Tranquil
Intuitive Drowsy

To achieve quality rest, we must minimize the number of times we wake up during the night. Frequent awakenings indicate that brain waves are operating at a high-frequency. The Znie Lite helps you prepare for sleep through the exposure of slower and more stable frequencies called Theta waves. Once our brains begin generating these ELF waves (Extremely Low Frequency), we're better prepared to sleep. For best results, activate Sleep mode 30 minutes before your designated bedtime.

☾ Calm Mode

Alpha waves

Relaxed Meditative
Introspective Calm

Alpha waves dominate our brain when our body and mind are relaxed. A shortage of Alpha waves lead to heightened feelings of stress and tension, putting pressure on our nervous system. In Calm mode, the Znie Lite emits frequencies of Alpha waves, that are effectively paralleled by our own brain waves.

Specification

Sleep tight with Znie. We strive to create a healthy sleep environment and help users sleep soundly.

Name	Znie Lite (P-100)
Size	3.94 x 3.94 x 2.76 x 1.57 (inch) 100 x 100 x 70 x 40 (mm)
Material	ABS, Poly Carbonate
Colour	White, Black
Power spec	DC 5V, 1.5A
Country of origin	Republic of Korea

Znie Key service

- 01** | Znie's Wireless ELF & Brain Wave Synchronization
- 02** | Helps with natural sleep and wake
- 03** | Increased theta waves (Increase melatonin)
- 04** | Improved quality of life through improved sleep quality
- 05** | Safe use of pets, including men and women of all ages
- 06** | Realization of ELF wireless transmission (miniaturization)
- 07** | Suggestion of high usability

Znie cares for underlying sleep problems.
