

SHANGHAI RUIMIN

Machinery Manufacturing Co., Ltd

ULTRASONIC GENERATOR

Company Overview

Our products stand the test of time, and RUI MIN is no exception.

Since its establishment, Shanghai Ruimin Machinery Manufacturing has been committed to the technical research and development, manufacturing, OEM of geotechnical equipment and ultrasonic welding equipment, as well as the construction service of product line integration.

At the same time, we attach great importance to product quality and research and development. In response to the energy consumption, safety, efficiency, and environmental protection issues of existing products on the market, we have made a series of improvements to the products, making them have the advantages of low energy consumption, high efficiency, and more safety in these fields.

In addition, the company has fully implemented CNC processing equipment, programmed quality management, and integrated customized production, further ensuring product quality.

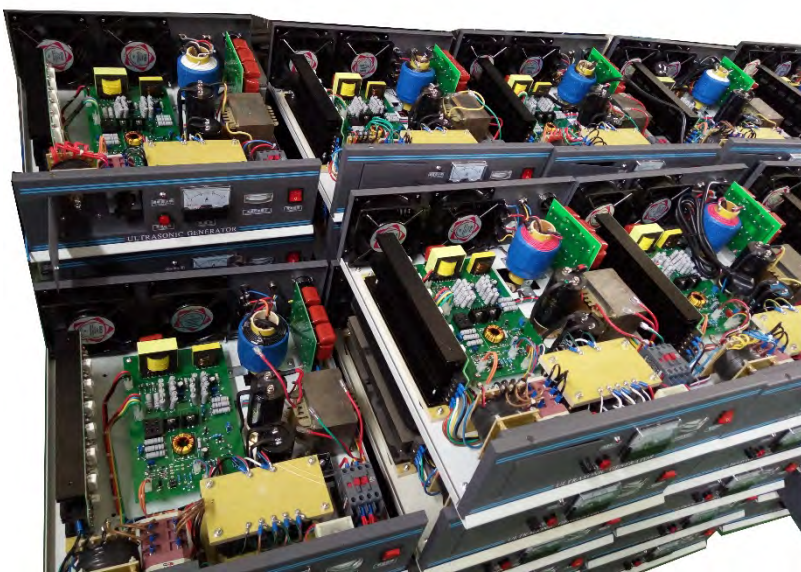

Shanghai Ruimin Machinery Manufacturing Co., Ltd.

Main categories: geocell welding machine, geogrid welding machine, ultrasonic welding machine, spot welding machine, ultrasonic generator.

Shanghai Ruimin Machinery Manufacturing Co., Ltd. relying on the principle of honesty, we have established long-term cooperative relations with many manufacturers and enterprises, and have won unanimous praise from our customers.

Ruimin Machinery will abide by the corporate philosophy of "strength creates high-quality goods, honesty wins the market", and continues to work hard with more perfect and efficient quality, more thoughtful and quick service to return your support as always, sincerely look forward to friends from all walks of life to visit the company, let us work together to create a better future!

Ultrasonic Generator

Ultrasonic generators can not only generate signals, but also control frequency and power, generate several or a series of frequencies, and serve as part of integrated, turnkey solutions, or independently power individual transducers.

Shanghai Ruimin's ultrasonic generator provides various frequencies of ultrasonic energy for the ultrasonic cleaning system.

The basic cleaning system usually consists of an ultrasonic generator and a cleaning tank or immersion transducer. The automatic tuning, line/load adjustment, and frequency sweep functions of the ultrasonic generator allow for more precise control of the cleaning process and performance.
