OUR SERVICES

1. **Sample evaluation:** Our company has a professional QE test engineer to provide you with sample evaluation services, find out the hidden dangers of product quality, improve product quality from the source, and save your worry, effort and money.

2. **Factory evaluation:** evaluate suppliers according to customer's needs, and strive to feed back the real status of the factory to you, including environment and personnel status, production capacity, quality control ability, etc. We focus on reviewing the conformity and actual effectiveness of the factory quality control process through every detail.

3. **Prenatal inspection:** We can arrange personnel to inspect your production materials in strict accordance with relevant specifications, guidelines and samples, and carry out detailed inspection on the first piece and production process, so that you can avoid delivery delay caused by batch errors in subsequent production or product quality degradation caused by heavy work.

4. **Process audit:** During the production process, we can audit every station, and carry out random inspection on semi-finished products and finished products in different links to ensure that they are consistent with samples. Analyze the causes of defects in the production process in time, and feed them back to you in real time. If necessary, urge the factory to improve the relevant production process and operation guidance, and even stop the line for rectification until the batch production is qualified. In the process, we will follow up and feedback the production progress for you.

5. **Sampling inspection for shipment:** carry out sampling inspection on batches of packaged finished products delivered by the factory, and we will carry out random sampling inspection in strict accordance with sampling standards, including product quantity, packaging, accessories, appearance, structure, functional performance, etc., and timely form QA report and feed it back to you to ensure the quality of the whole batch of products.

6. **Full inspection of shipment:** If you need it, we will carry out 100% full inspection of finished products before shipment to minimize your risks.

7. In-factory inspection: We can send QA personnel to stay in the factory to track the whole process quality of your products. This service is suitable for orders with long delivery time and large quantity.

8. QC dispatch: We will be responsible for training our QC, knowing your culture, products and related systems, and transferring to your company for dispatch at any time, so as to avoid the high cost problems such as labor contract and talent reserve caused by your temporary recruitment.

9. Container loading supervision: We will supervise and confirm the model, specification, quantity, label and packing rationality of the packed container products.
