Humane Plastic Rat Rodent Control Catcher Trap Electric Mouse Killer

Item No: ATE1123

Name: Electric mouse trap

Material: Plastic

Size: 17\*8\*4.2cm

Color: Black

Target pests: Mouse, rat and rodent

Package: 1Pack

### Special features:

1. Instantly kills the rat as long as it gets into the trap, but purely no pain to them, no any chance of letting it get away
2. No blood and no need to touch the rodent. Just picking up the device and throw the dead body into the trash can
3. The electric mouse killer is detachable, which is more convenient and safer to clean, also prevents electric shock
4. We have improved some places as following descriptions:
  - 1) We increase a baffle on the entrance of the trap, and it can prevent mouse from escaping, and we also leave some space beside the baffle, so that the tail of mouse won't be hurt when being caught, and the baffle will close entrance immediately when mouse enter the trap and touches the pedal
  - 2) We design a charging port for the cable with indicator light, the cable is for outdoor use, when you put the trap outside and mouse is caught, you will know it by seeing the indicator light
  - 3) The size of new style is bigger, and it will have more space for mouse
  - 4) Our product is also matched with disposable gloves and rubbish bags
  - 5) It can be powered by batteries and an adapter
  - 6) We increase four high-voltage plates and bait slot inside the box, more effective
  - 7) We add two holes on the cover for mouse to breathe

### Application situations:

Indoor and outdoor

### Using steps:

1. Put the bait into the bait slot of the trap
2. Insert 4 batteries in the back or simply plug in the device with the provided adapter
3. We suggest placing it in the corner based on the fact that rats like to move against the wall (No rainy or damp place), and it can also be placed outside with long cable with indicator light
4. Turn on the switch, and wait for mouse come

### The contrasts between our product and other product:

This is the differences between our product and other product. The appearance is a little different, but the function is basically the same

1. Sound reminder: When the mouse is caught, our product will make a sound to remind user to dispose of the dead mouse and clean the trap
2. Material: Our product is made of flame retardant material, for example, if there is a fire, and it burns the product, but once fire leaves product, it won't keep burning. Because some people have carpets at home, the flame retardant material can reduce damage, also safe for your family. But material of the other product is not flame retardant material, even if fire leaves the product, product is still burning, so if the product touches the carpet with fire during the burning process, the carpet will also burn, that will be very danger, so our product is safer to use at home
3. Appearance: Our product looks nicer with the half transparent new design

**The contrasts between our product and other product:**

The other product

There are many contrasts between our product and other product, please see the following details:

1. The size of other product is 15 \* 6 \* 7.8cm, the size of our product is 17\*8\*4.2cm
2. The weight of other product is 243g, and the weight of our product is 355g
3. Their product only has two high pressure plates, but our product has four high pressure plates, so the cost of high pressure plates is twice than theirs

The other product

Our product

4. Please see the two pictures above, about the other product, after catching mouse, they can only open cover to dispose of the mouse; But about our product, we can not only open cover to clean mouse after catching them, our product can also be detached, just like the right picture. That is to prevent the situation that some electronic accessories touch water, and make the

circuit boards break when washing the trap, our detachable is also very safe

5. About the material: Our product is made of flame retardant material, for example, if there is a fire, and it burns the product, but once fire leaves product, it won't keep burning. But the material of other product is not flame retardant material, if you need the contrast video, we can send it to you for reference. For electric product, safety is the most important. If there is a fire accident, then it will be very dangerous. The cost of flame retardant material is much higher than that of non flame retardant material

6. The quality of electronic accessories that we use is the best, just to guarantee quality. But many factories use bad material on the product. Because the material has been put inside the product, customers can't see them at all, the manufacturers can use bad material. That is the core part of product, we can't do that. Because it will cause hidden danger, the quality will also be reduced in the meantime

7. The function of our product is the most complete among all products, in the meantime, the quality of inner electronic accessories are the best. Our cost will be higher, because we want to make high-end product
