

SOCIAL ENTERPRISE

Korea Vacuum Safety Co., Ltd. is the first Korean professional manufacturing company that has been approved as a social enterprise by the Ministry of Employment and Labor. Our company pursues to improve the quality of life for local residents by offering social services, employment, or other community support to socially disadvantaged groups. Additionally, we promise to adopt the first advanced smart manufacturing system in the industry in order to manufacture the highest-quality road safety and construction safety products in the world.

Providing sustainable jobs

Including the socially disadvantaged group in the labor market and Increase of the number of satisfying jobs

Local Community revitalization

Integration of Local Community. Development of social investment for enhancing the local economy

Expansion of social services

Gratifying New Public Service Demands Public Service Innovation

Ethical market expansion

Development of a culture of ethical management and corporate social responsibility fostering a responsible consumption culture

The best stainless convex traffic mirror in Korea
It is extremely durable even in harsh exterior situations.

Square type
800mm x 600mm

Convex traffic mirror fabrication

An automated technique is used to assemble the reflector, the rear plate, and the protective visor in order to achieve and maintain a stronger and more durable stability. By using the curling technique, the edge of the convex traffic mirror is given a softly curved surface, avoiding danger factors and safety mishaps

Differentiated technology

Korea Vacuum Safety's distinctive technology has been used to implement a differentiated bracket, and a prop-connection bracket with outstanding constructability and cost savings has also been developed.

Prop connection type bracket
(250mm * 100mm)

Convex traffic mirror protective visor

The protective visor's form and color are not affected by the extruding powder-coated aluminum material, which allows for continual condition maintenance.

Stainless Convex traffic mirror

Product name : Stainless convex traffic mirror
Material: stainless steel
Size : ø1,000mm, ø800mm, ø600mm, 800mm x 600mm
Illuminance flexibilities: 1,330~1,360cd (Very bright)

Product Features

It is a stainless road reflector made using "Korea's first and greatest production technology" that uses a robotic automated manufacturing method and is semi-permanent without losing its reflexivity even under a wide range of environmental conditions.

Bracket patent (No. 10-2437426)

The time, effort, and cost required to adjust the angle of the convex traffic mirror in the upper and lower directions may be reduced by using a structure that enables angle adjustment of the road reflector's up and down directions and causes guiding and stopping action while adjusting the angle.
